Top 10 Tips for Designing Presentations in Prezi

1. The learning curve is a little steeper than other technologies, so be patient and stay with it.
2. Think of Prezi as a canvas for designing presentations. Put all your ideas on the canvas and then connect the frames.
3. Create a big picture on the canvas to show at the beginning and end of the presentation. This illustrates where the presentation will go in the beginning and revisits what has been covered at the end.
4. Use zooms and animations purposefully to illustrate connections and relationships between concepts.
5. Don’t zoom and pan too fast to avoid motion sickness for your audience.
6. Placing frames in relative proximity for the presentation sequence on the canvas will minimize large sweeping zooms.
7. Use images, shapes, charts, symbols, etc. whenever possible to better illustrate connections between ideas when showing full canvas.
8. Continue to follow design principles like keeping it simple and giving attention to white space.
9. Prezi can be more than a lecture support tool. Be creative in imagining the various ways you can repurpose Prezi for student projects, note taking, resumes, e-portfolios, screencasts, etc.
10. Practice before presenting with Prezi the first time. Get very comfortable with the presentation mode.
